LEAD BACKEND ENGINEER | AI ENGINEERING | CLOUD & MICROSERVICES

Summary

- Senior Software Engineer with 13+ years of experience building, scaling, and supporting enterprise applications, Java backend services, and cloud-based solutions across healthcare and enterprise tech ecosystems. Hands-on expert in Java 17, Spring Boot, RESTful microservices, relational databases, concurrency, and high-stakes data-integrity troubleshooting.
- Actively driving efficiency through AI-assisted engineering, leveraging Python, LangChain, and Spring AI to build intelligent workflows, implement LLM output validation, and automate complex test cycles. Dedicated to clean architecture, secure development practices, and resilient production delivery.

Technical Skills

Programming Languages: Java 17, Python, JavaScript, SQL
Backend & APIs: Spring Boot, Microservices, REST API Design, JPA, Hibernate, API Integration
AI & LLM Engineering: LangChain, Spring AI, LLM Integration, Structured Outputs, Streaming, Tool Validation, LLM Evaluation
RAG & Vector Search: Enterprise RAG Concepts, Qdrant, ChromaDB, FAISS, Embeddings
Databases & Data: Oracle Database, Sybase, SQLite, Relational Data Modelling, Stored Procedures, Transaction Management
Cloud & DevOps: Oracle Cloud Infrastructure (OCI), Docker, Git, Maven, YAML, OpenAPI
Testing, Security & Observability: JUnit 5, Mockito, Fortify, OWASP Dependency-Check, OWASP ZAP, OpenTelemetry

Work experience

Oracle Cloud Infrastructure (OCI) 2022-02 - 2026-10

Senior Member of Technical Staff |Lead Backend & AI Engineering

- Developed and enhanced Java 17 and Spring Boot services supporting automated test-suite generation and related workflows,
  including parsing, data-context discovery, reporting, archiving, deployment and integration.
- Built AI-assisted engineering workflows using Python, LangChain and Spring Boot to help discover data context, interpret logs and restructure integration-test flows.
- Implemented LLM response validation using Relevancy-Evaluator and Fact-Checking-Evaluator frameworks to assess generated content and improve output reliability.
- Designed and maintained API- and YAML-driven data-context workflows, including preview, save, read, update and confirmation operations.

- Investigated and resolved concurrency and data-integrity issues involving optimistic locking, persistence updates and Oracle Database transactions.
- Expanded automated test coverage with JUnit 5 and Mockito, improved application logging, and collaborated across application and persistence layers to resolve defects and support reliable releases.
- Mentored 4+ junior developers and contributed to code reviews and engineering practices.

Cerner Healthcare 2018-11 - 2022-02

Senior Software Engineer | Backend Development

- Developed and maintained Java and Spring Boot backend services for enterprise healthcare applications.
- Delivered application enhancements and defect fixes, participating in peer reviews and root-cause analysis to improve service reliability.
- Addressed security findings identified by Fortify, OWASP Dependency-Check and OWASP ZAP, supporting secure software development practices.

GE Healthcare 2014-05 - 2018-11

Software Engineer | Application Development

- Developed and maintained Java- and JavaScript-based healthcare applications supporting clinical and business workflows.
- Worked with Sybase databases and stored procedures to support transactional application functionality and data access.

Foofys Solution and Tagtual Technology 2013-01 - 2014-05

Mobile Applications Developer

- Developed mobile applications for Android and Windows Phone using Java, SQLite and PhoneGap.
- Integrated application features with HTTP and JSON-based services and web technologies.

Education

Kavi Kulguru Institute of Technology and Science, Nagpur University

Bachelor of Engineering

- Bachelor of Engineering (B.E.), Electronics -- Kavi Kulguru Institute of Technology and Science, Nagpur University

Anjuman Polytechnic

Diploma

- Diploma, Electronics and Telecommunication -- Anjuman Polytechnic, Nagpur
